

Initial Charts and Graphs - Experimental Design

Status: Pre-Implementation Phase

We are currently in the design phase of our fan-out algorithm experiments. Below are the chart templates that will be populated with actual data once testing begins.

Planned Chart Categories

1. Performance Comparison Charts

- Timeline read latency across user scales
- Post creation write latency
- System throughput analysis

2. Resource Utilization Charts

- CPU usage during peak load
- Memory consumption patterns
- Storage requirements by algorithm

3. Scalability Analysis Charts

- Performance degradation curves
- Resource efficiency ratios
- Database query complexity

Current Status

-  Experimental design complete
-  Chart templates prepared
-  Implementation in progress
-  Data collection pending
-  Results analysis pending
